

Personal Expense Tracker - Project Report

1. Introduction

The Personal Expense Tracker is a simple web application that helps users manage their personal income and expenses. It allows users to add, view, and delete transactions to maintain a clear record of their financial activities.

2. Technologies Used

- HTML
- CSS
- JavaScript

3. Key Features

- Add income and expense transactions
- View total balance, income, and expenses
- Delete any transaction
- Clean and simple user interface

4. File Structure

- index.html – Structure of the web app
- style.css – Styling of the application
- script.js – Logic for handling transactions and calculations

5. How It Works

1. The user enters a transaction description and amount.
2. The app determines if it's income or expense based on the amount sign.
3. The app updates the list and recalculates total balance, income, and expense.
4. Transactions can be removed as needed.

6. Future Improvements

- Add user login and authentication
- Use a database for storing transactions permanently
- Add graphs/charts for analysis
- Enable monthly/weekly filtering

7. Conclusion

This project demonstrates basic front-end web development skills and logical thinking. It serves as a good foundation for more advanced financial applications.
